SUMMARY

Data Science undergraduate with hands-on experience in data science, app development, software engineering, DevOps practices, and AI-based detection pipelines. Skilled in full-stack development, authentication and authorization, machine learning, data cleaning automation, version control, and applied analytics for real-world projects.

EDUCATION

B.Sc. (Hons) Information Technology - Specialized in Data Science 2023 - 2027

Sri Lanka Institute of Information Technology (SLIIT), Malabe

Current cumulative GPA - 3.75

GCE - Advanced Level 2021 - 2023

Combined Mathematics - C; Chemistry - C; Physics - S

WORK EXPERIENCE

ARTHUR C. CLARKE INSTITUTE FOR MODERN TECHNOLOGIES Moratuwa, Sri Lanka

Data Science Intern

Feb 2026 - Sep 2026

- Supported a government train-elephant collision prevention project using YOLO-based elephant detection workflows for railway environments.
- Worked with AI inference pipelines, dataset handling, data cleaning, and AI computing platforms for applied AI deployment.
- Implemented an automation pipeline to clean datasets from 20 institute weather stations, improving consistency and reducing manual preprocessing.
- Performed weather analytics by studying correlations between satellite-derived data and station data across Sri Lankan regions.

PROJECTS

SMART CAMPUS OPERATIONS HUB Collaborative | Team Lead / Security Module

- Led team coordination and promoted DevOps practices including structured Git branching, pull-request workflow, version control discipline, and integration through GitHub.
- Owned security and communications module: user registration/login, JWT authentication, Google OAuth2, role-based access control, user management, protected routes, and notifications.
- Built as a full-stack campus operations platform using Java Spring Boot, React, Vite, Tailwind CSS, SQLite, OAuth2, JWT, Git, and GitHub Actions.

WEATHER STATION DATA CLEANING AND IMPUTATION WEB APPLICATION Individual

- Designed a full-stack app to upload raw weather-station Excel files and generate cleaned, imputed, analysis-ready datasets with downloadable CSV/JSON/ZIP outputs.
- Planned React + Vite + Tailwind frontend, Spring Boot REST API backend, PostgreSQL metadata storage, local file storage, and Python cleaning-engine modules.
- Included file validation, basic and quality cleaning, short-gap imputation up to 24 hours, full EDA imputation, flag matrix generation, and cleaning summary reports.

AUTOFIKS - Vehicle Service and Spare Parts Management System Collaborative

- Designed a web application for a real-world client to automate vehicle service booking, spare parts ordering, live service tracking, and employee management.
- Developed secure user, employee, and admin authentication with role-based access control, led user management features, and built an integrated chatbot for user support.

MOVIERAZZI - Intelligent Movie Night Planner Collaborative | Team Lead / NLP Agent

- Built a full-stack movie-planning application using LLM and NLP agents to analyze user preferences and automate personalized movie recommendations and scheduling.
- Designed the Preference Analyzer Agent to extract user preferences and generate personalized movie suggestions through responsible AI workflows.

SKILLS

Technical Skills: Full MERN Stack; React; Vite; Java Spring Boot; Python AI and ML libraries; SQL; Oracle; Microsoft SQL Server; PostgreSQL; SQLite; RStudio; AWS; MongoDB; Notebook; DevOps

CERTIFICATIONS

- Completed KET and PET of Cambridge English Language Assessment with merit passes (Level A2).
- Completed FCE Cambridge Exam with a merit pass (B2 First Certificate).
- Completed TOEFL Junior Exam with a total score of 810/900.
